Asbestos Waste Strong growth in orders and in deliveries to INERTAM

As indicated in our last communiqué of 20/11/06, the order book for the treatment of asbestos waste has grown considerably.

Our initial estimate was for 5100 tons of orders taken in 2006. The actual figure of orders taken in 2006 is **6417 tons**, or **an increase of 94%** compared to 2005.

It is also worthy of note that December 2006 broke the record for deliveries with a total of **570 tonnes**.

In November two Belgian contracts were signed (of which the WORLD TRADE CENTER of Brussels) for 2.2M€.

The end of the year also confirmed our position as leader on the worksite of « La Tour Montparnasse » with several large national companies (MMA, MGEN, UGICI...).

In the same period we have taken our first direct order from the « Marine Nationale » (French Navy).

The amount of orders taken in **2006** comes to **9.7M€**.

2007 will see the start of the **TSR** worksite in Switzerland (**700K€**) and the establishment of strategic partnerships with major domestic and international players. For example, an agreement has been reached with **DHL** for European transport ; and after the success of 2006, the agreement between *Recydis* (Groupe PAPREC) and COFAL has been renewed for 2007.

Since 1992 Europlasma has specialised in the destruction of hazardous waste. Positioned in a high-margin niche market, the Groupe treats wastes such as asbestos or incinerator residues. EUROPLASMA therefore offers an alternative solution to landfill, in accordance with the law and with European objectives aiming to reduce the amount and toxicity of waste, therefore maximizing recycling.

Europlasma is listed on the « Marché Libre » of the Euronext Paris Stock Exchange
