## ISO 9001 CERTIFICATION

Europlasma embarked upon a drive to achieve ISO 9001 certification at the beginning of 2001. Its efforts led to implementation of the Quality unit and ISO 9001 version 2000 certification was achieved on 26 August 2003 (certified by COFRAC-accredited SGS).

As a result, all the industrial projects to sell plasma systems and vitrification units were conducted as part of processes implemented for quality management purposes.

Since the three-year certification period is reaching its end, the company was audited on **15 May 2006** to renew the certification.

Following this audit, **ISO 9001 certification was renewed** for a further period of three years. This accreditation reflects the Company's high professional standards and meticulous approach.
