Our future lies in our hands...

Europlasma S.A.

The new 300kW torch will be validated under air operation in June 2007. Beyond the tests for the development of the GALACSY process, this torch aims at niche markets such as small gasifier and new applications like the starters of power stations.

The 300kW torch system for the gasification of municipal solid waste has been delivered.

Waiting for international confirmation: Algeria, Abu Dhabi, Korea, Japan and Malaysia.

Accounts 2006: As anticipated in November 2006, the accounts on this exercise will show a significant operating loss coming from a lack of waste to be processed on the COFAL site and projects shifts for Europlasma.

Inertam-COFAL : L3 records

Production:

Over 6 weeks (from 07/01/01 to 07/02/15), more than 1000 tons have been vitrified, that is to say 30% more than the 2007 forecasted figures. It results, of course, a positive operating income on this period.

Line 3 is in programmed stop, its restarting will be effective on next 15th April. Meanwhile, lines 1 and 2 take over.

Trade:

Continuing the very good dynamics of order takings over the 2nd semester 2006, we record for January and February 2007 more than 1000 tons of orders for an estimated turnover at 1.7M€, namely an increase of 110% compared with 2006. In addition, we record 2 orders (900K€) coming from except EU (*Norvatis Morocco Casablanca and French-speaking Switzerland Television*) for which we obtained the agreement of importation of French Authorities. Waste will be delivered from March 2007.

Europe Environnement : 2007 prospects

2007 exercise starts with very good prospects. Several contracts are in the course of signature and in particular in the public markets by the means of stations of purification.

The order book remains on a very promising level with a continued load of more than 6 months in advance and allows the consolidation and confidence to achieve the 2007 goal: turnover of 15300K€ and a ratio of net income of about 5%.

Strong international activity with orders coming from, in particular, Algeria, China, Russia, Ireland and the Qatar.

Agenda

March 2007

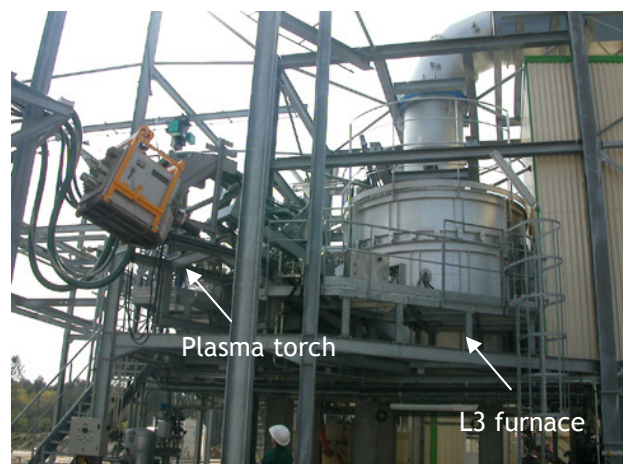

Taking part in a "Small cap event" organized by the "Société de Bourse Gilbert Dupont".

April 2007

Communication of consolidated accounts for the year 2006.

June 2007

Europlasma will participate to the Waste to Energy exhibition in Bremen.

Founded in 1992, Europlasma specialises in the destruction of hazardous waste. Positioned in high value-added niche markets, the Group treats waste such as asbestos and incineration residue. Europlasma thus offers an alternative to using landfills, in line with the law and EU goals of cutting waste generation and toxicity as well as of encouraging recycling.
